# **LIST OF DEFINITIONS AND ABBREVIATIONS**

Term	Definition
AAQ NEPM	National Environment Protection (Ambient Air Quality ) Measure
ACT	Australian Capital Territory
СО	Carbon Monoxide
BAM	Beta Attenuation Monitor
NATA	National Association of Testing Authorities
ND	Not Demonstrated
NEPC	National Environment Protection Council
$NO_2$	Nitrogen Dioxide
O <sub>3</sub>	Ozone
PMS	Performance Monitoring Station
PM <sub>2.5</sub>	Particles with an equivalent aerodynamic diameter less than or equal to 2.5
	Micrometers
$PM_{10}$	Particles with an equivalent aerodynamic diameter less than or equal to 10
	Micrometers
ppm	Parts per million by volume – parts of pollutant per million parts of air
Q	Quarter (e.g. Q1 means the first quarter of the year)
SO <sub>2</sub>	Sulphur Dioxide
μg/m³	micrograms per cubic metre

## **OVERVIEW**

This report presents the results of ambient air quality monitoring in the ACT for the 2011 calendar year and assesses them in accordance with the requirements of the National Environment Protection (Ambient Air Quality) Measure (AAQ NEPM) which was made by the National Environment Protection Council (NEPC) on 26 June 1998.

Monitoring results demonstrate that the major impacts on Canberra's air quality in 2011, as in previous years, came from the accumulation of combustion particles from wood heaters in cold, highly stable air, hazard reduction burns and dust storms. With the exception of particulate matter less than 2.5 microns (PM<sub>2.5</sub>) all measured parameters are below the AAQ NEPM standards.

There were four exceedances of the  $PM_{2.5}$  24-hr advisory reporting standard which occurred in May and July 2011. These exceedences were due to wood heater emissions in winter.

Monitoring was performed in accordance with the ACT's monitoring plan, AAQ NEPM Technical Papers and ACT Health's accreditation by the National Association of Testing Authorities (NATA).

## **MONITORING SUMMARY**

## **Current Performance Monitoring Stations**

The ACT Government has been undertaking ambient air quality monitoring in Canberra since the early 1990's. The Health Directorate is responsible for the Government's ambient air quality monitoring network. The Environment and Sustainable Development Directorate is responsible for annual reporting under the AAQ NEPM.

The AAQ NEPM monitoring network in the ACT currently consists of two performance monitoring stations (PMS) at Monash and Civic respectively. The Monash station is approximately 300 metres west of Cockcroft Avenue in the Monash district playing fields. The Civic station is located at the northern end of the carpark on the western side of the Olympic swimming pool adjacent to Allara Street. The compliance and non-compliance criteria for both PMS against the siting standard AS/NZS 3580.1.1:2007 are listed in Table 1 below.

Table 1 Summary of stations' siting compliance with AS 3580.1.1-2007

Station	Station	Height	Minimum	Clear sky	Unrestricted	20m	No boilers	Minimum
	type	above	distance	angle of	airflow of	from	or	distance
		ground	to support	120°	270°/360°	trees	incinerators	from road
			structure				nearby	or traffic
Monash	Т	$\overline{\square}$	V	V	$\overline{\mathbf{V}}$	Ø	V	$\square$

T denotes trend; P denotes performance

Under Clause 13 of the AAQ NEPM a PMS should, to the extent practicable, be sited in accordance with AS/NZS 3580.1.1:2007 and must be located in a manner such that they contribute to obtaining a representative measure of the air quality likely to be experienced by the general population in the region. Unfortunately as can see from Table 1 the Civic station is not sited in accordance with the standard. In addition to this it is located on the outskirts of the central business district of Civic and is not representative of general population exposure as required by Clause 13(2) of the AAQ NEPM.

Based on the 2012-13 ACT Budget released on 5 June 2012, the ACT Government will allocate funding for establishing another PMS that would be fully compliant with the AAQ NEPM. The Health Directorate has consulted within Government and based on a preliminary analysis of site requirements/constraints short listed a site in the central Belconnen area.

Until this AAQ NEPM monitoring station can be established, data from the Civic station, whilst not sited or located in accordance with Clause 13 of the AAQ NEPM, is being used for annual reporting purposes.

Consistent with the ACT's Ambient Air Quality Monitoring Plan, which was approved by NEPC in 2001, this report only covers four of the six criteria pollutants, namely carbon monoxide (CO), nitrogen dioxide ( $NO_2$ ), photochemical oxidants as ozone ( $O_3$ ) and particulate matter less than 10

micrometres ( $PM_{10}$ ). Because of a lack of heavy industry the ACT has never monitored sulphur dioxide ( $SO_2$ ), and ceased monitoring lead in July 2002, following the phase out of leaded fuel on 1 January 2002, with ambient air lead levels being less than 2% of the standard. The report also covers  $PM_{2.5}$ .

Both stations contain instrumentation that continuously monitors CO,  $O_3$ , and  $NO_2$ .  $PM_{10}$  and  $PM_{2.5}$  monitoring is undertaken at Monash and only  $PM_{10}$  monitoring at Civic.

# **Monitoring Methods**

The ACT monitoring is conducted in accordance with the relevant Australian standard as shown in Table 2.

Table 2 Methods used for monitoring AAQ NEPM pollutants

Pollutant	Standard	Title	Method Used
Carbon	AS 3580.7.1-1992	Ambient Air – Determination	Gas filter correlation/

		the Atmosphere	

## **NATA Accreditation Status**

The ACT Government monitoring network is accredited by NATA for the measurement of all AAQ NEPM pollutants except SO<sub>2</sub> as required under Clause 12 of the AAQ NEPM.

# ASSESSMENT OF COMPLIANCE WITH STANDARDS AND 2008 GOAL

For the purpose of this report, air quality is assessed against the AAQ NEPM standards and goals as specified in Schedule 2 of the AAQ NEPM and reproduced in Table 3.

The standards against which air quality is assessed are concentrations in parts per million (ppm) or micrograms per cubic metre ( $\mu g/m^3$ ) (refer to column 3,Table 3).

The goal of the AAQ NEPM is to achieve the Standards as assessed in accordance with the monitoring protocol within 10 years of commencement (i.e. 2008) to the extent specified in Schedule 2 of the AAQ NEPM. The extent is expressed as a maximum allowable number of exceedences for each standard (refer to column 4,Table 3). These are set to account for unusual meteorological conditions and, in the case of particles, natural events such as dust storms and bushfires, which cannot be controlled through normal air quality management programs.

The AAQ NEPM also specifies advisory reporting standards for  $PM_{2.5}$ . The goal for  $PM_{2.5}$  is to collect sufficient data to facilitate a review of the  $PM_{2.5}$  standards, which has been completed through the review of the AAQ NEPM.

Table 3: AAQ NEPM standards and goals

Pollutant	Averaging	Maximum	Goal within 10 years
	Period	concentration	Maximum allowable
			exceedences
Carbon monoxide	8 hours	9.0 ppm	1 day a year
Nitrogen dioxide	1 hour	0.12 ppm	1 day a year
	1 year	0.03 ppm	none
Photochemical oxidants	1 hour	0.10 ppm	1 day a year
	4 hours	0.08 ppm	1 day a year
Sulfur dioxide	1 hour	0.20 ppm	1 day a year
	1 day	0.08 ppm	1 day a year
	1 year	0.02 ppm	none
Lead	1 year	0.050 μg/m <sup>3</sup>	none
Particles as PM <sub>10</sub>	1 day	50 μg/m <sup>3</sup>	5 days a year
Particles as PM <sub>2.5</sub> #	1 day	25 μg/m <sup>3</sup>	Not applicable
	1 year	8 μg/m³	Not applicable

<sup># -</sup> Advisory reporting standards only

The following tables (Table 4 to Table 8) summarise compliance with the standards and goals of the AAQ NEPM. For each pollutant, the data availability (quarterly and annual), the number of days when standards were exceeded, the annual mean (where an annual standard exists) and an assessment of compliance, are given for each monitoring station.

A station's performance is assessed as complying with the AAQ NEPM (i.e. 'MET') if the number of exceedances is no more than the number specified in Schedule 2 of the AAQ NEPM and data availability was at least 75% in each quarter of the year. A region demonstrates compliance with the AAQ NEPM when either all stations in the region demonstrate compliance, or when the region meets approved pollutant screening criteria.

A station's performance is assessed as not complying with the AAQ NEPM (i.e. 'NOT MET') if there is more than the number of exceedances specified in Schedule 2 of the AAQ NEPM, even if the data availability rates are less than the 75% required.

A station's performance is assessed as 'NOT DEMONSTRATED' (ND) if it records exceedances on a number of days less than that allowed, but has data availability rates less than 75% in any quarter. This may be due to instrument failures, temporary closures for upgrading or closures to allow relocation of the station.

These categories (i.e. MET, NOT MET and ND) are used in the tables on the following pages.

## **Carbon monoxide**

During 2011, no exceedences of the CO standard were recorded in the ACT and compliance against the AAQ NEPM goal was demonstrated at both stations.

Table 4: 2011 compliance summary for CO

AAQ NEPM standard - 9.0 ppm (8-hr average)

Performance monitoring			vailabilit 6 of hour	•	Number of exceedences	Performance against the	
station	Q1	Q2	Q3	Q4	Annual	(days)	standards and goal
Monash	95.6	94.4	95.6	95.4	95.3	0	MET
Civic	94.2	93.4	93.6	94.7	94.0	0	MET

## Monash

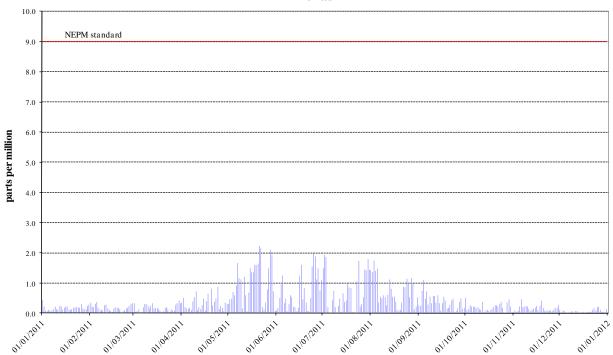

Figure 1: Daily max for CO 8-hr average - Monash

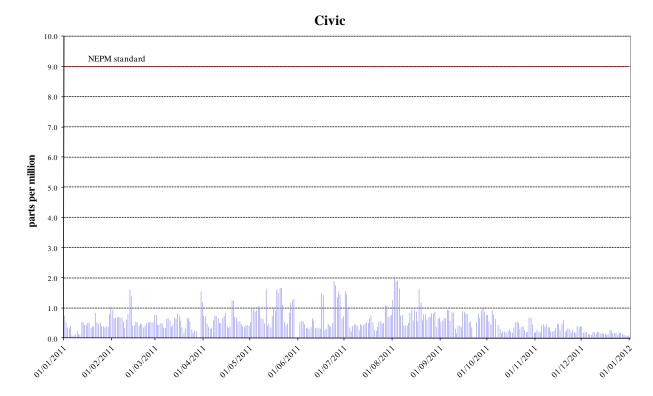

Figure 2: Daily max for CO 8-hr average - Civic

# Nitrogen dioxide

During 2011, no exceedences of the  $NO_2$  standards were recorded in the ACT. Compliance against the AAQ NEPM goal was demonstrated at Monash but not at Civic because of instrument failures at various times throughout the third quarter.

Table 5: 2011 compliance summary for NO<sub>2</sub>

AAQ NEPM standard – 0.12 ppm (1 hour average), 0.03 ppm (1 year average)

Performance monitoring station	Data availability rates (% of hours)			ates	Annual mean Concentration (ppm)	Number of 1 hour exceedences (days)	Perform agains standar goo	t the ds and

Monash	95.5	94.4	94.7	89.6	93.6	0.005	0	MET	MET
Civic	94.1	89.1	70.9	90.5	86.1	0.008	0	ND	ND

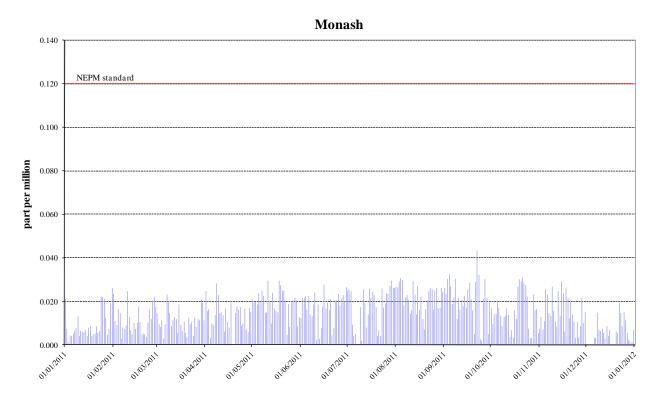

Figure 3: Daily max for NO<sub>2</sub> - Monash

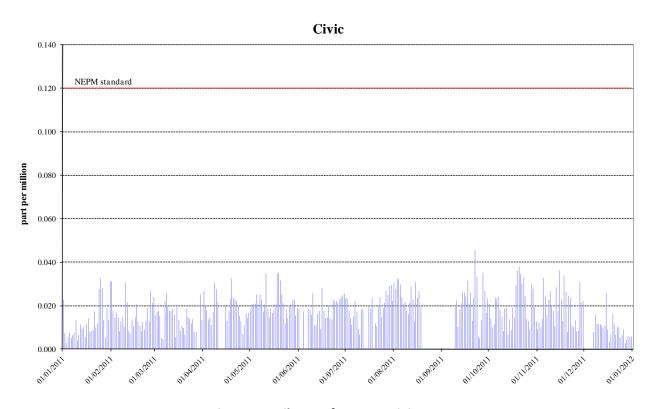

Figure 4: Daily max for NO<sub>2</sub> – Civic

## **Ozone**

During 2011, no exceedences of the 1 hour and 4 hour standards for  $O_3$  were recorded in the ACT, and compliance against the AAQ NEPM goal was demonstrated at both stations.

Table 6: 2011 compliance summary for O<sub>3</sub>

AAQ NEPM standard – 0.10 ppm (1 hour average), 0.08 ppm (4 hour average)

Performance monitoring station	ı	Data a	vailabi 6 of ho	•	tes	Number of exceedences (days)		Performance against the standards and goal

# $PM_{10}$

During 2011, there were no exceedences of the 24-hr  $PM_{10}$  standard recorded in the ACT, and compliance against the AAQ NEPM goal was demonstrated at both stations.

Table 7: 2011 compliance summary for PM<sub>10</sub>

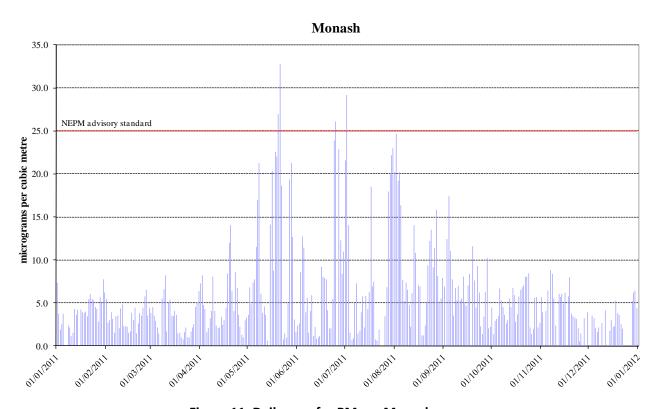

Figure 11: Daily max for PM<sub>2.5</sub> – Monash.

# **ANALYSIS OF AIR QUALITY MONITORING**

Annual summary statistics contained in Table 9 to Table 14 below allow assessment of air quality against the standards and the extent of compliance with the goal. Instances where the standard or goal has been exceeded are highlighted in bold. The AAQ NEPM states that the short-term standards should not be exceeded on more than one day for CO,  $NO_2$  and  $O_3$ , and on no more than five days per year for  $PM_{10}$ . The second highest daily value for the year (or the sixth for  $PM_{10}$ ) indicates the extent to which the standards are or are not met.

## Carbon monoxide

Table 9: 2011 summary statistics for daily peak 8-hour CO

AAQ NEPM standard - 9.0 ppm (8-hr average)

Performance monitoring station	Number of valid days	Highest (ppm)	Highest (date/time)	2 <sup>nd</sup> Highest (ppm)	2 <sup>nd</sup> Highest (date/time)
Monash	360	2.2	21 May 03:00	2.1	22 May 05:00
Civic	357	2.0	02 Aug 23:00	1.9	04 Aug 21:00

Carbon monoxide levels are well below the AAQ NEPM standard. Because of both an improvement in vehicle emissions and a decline in wood heaters numbers, levels are trending down (refer to **Figure 12** and **Figure 13**). The highest recorded value in the ACT during 2011 was 2.2ppm at Monash. This is only 24% of the standard.

## Nitrogen dioxide

Table 10: 2011 summary statistics for daily peak 1-hour NO<sub>2</sub>

AAQ NEPM standard 0.12 ppm (1 hour average)

Performance monitoring station	Number of valid days	Highest (ppm)	Highest (date/time)	2 <sup>nd</sup> Highest (ppm)	2 <sup>nd</sup> Highest (date/time)
Monash	353	0.043	22 Sept 21:00	0.033	04 Sept 20:00
Civic	324	0.046	22 Sept 21:00	0.038	20 Oct 22:00

Nitrogen dioxide levels are well below the AAQ NEPM standard and have remained stable over the last decade. The highest recorded 1 hour value during 2011 was 0.046ppm at Civic, which is only

38% of the standard. The highest recorded annual average in 2011 was 0.008ppm at Civic. This is only 27% of the standard.

### Ozone

Table 11: 2011 summary statistics for daily peak 1-hour O<sub>3</sub>

AAQ NEPM standard 0.10 ppm (1-hour average)

Performance monitoring station	Number of valid days	Highest (ppm)	Highest (date/time)	2 <sup>nd</sup> Highest (ppm)	2 <sup>nd</sup> Highest (date/time)	
Monash	362	0.056	22 Sept 15:00	0.053	20 Sept 01:00	
Civic	352	0.052	20 Sept 01:00	0.052	22 Sept 14:00	

Table 12: 2011 summary statistics for daily peak 4-hour O<sub>3</sub>

AAQ NEPM standard 0.08 ppm (4-hour average)

Performance monitoring station	Number of valid days	Highest (ppm)	Highest (date/time)	2 <sup>nd</sup> Highest (ppm)	2 <sup>nd</sup> Highest (date/time)
Monash	361	0.054	22 Sept 18:00	0.052	09 Nov 18:00
Civic	352	0.050	20 Sept 03:00	0.049	22 Sept 17:00

Ozone levels are below the AAQ NEPM standard. The highest recorded 1-hour value in the ACT during 2011 was 0.056ppm at Monash, which is 56% of the standard. The highest recorded 4-hour value in the ACT during 2011 was 0.054ppm at Monash. This is 68% of the standard.

## $PM_{10}$

Table 13: 2011 summary statistics for daily peak PM<sub>10</sub>

AAQ NEPM standard 50  $\mu g/m^3$  (24-hour average)

Performance monitoring station	Number of valid days	Highest (μg/m³)	Highest (date)	6 <sup>th</sup> Highest (μg/m³)	6 <sup>th</sup> Highest (date)
Monash	362	40.0	14 Nov	31.9	20 May
Civic	354	29.2	20 May	21.5	19 May

16

 $PM_{10}$  levels are below the AAQ NEPM standard. The highest  $PM_{10}$  level recorded during 2011 was  $40.0 \mu g/m^3$  on 14 November 2011. This is 80% of the AAQ NEPM standard.

## $PM_{2.5}$

## Table 14: 2011 summary statistics for daily peak PM<sub>2.5</sub>

AAQ NEPM standard 25 μg/m³ (24-hour average)

Performance monitoring station	Number of valid days	Highest (μg/m³)	Highest (date)	6 <sup>th</sup> Highest (μg/m³)	6 <sup>th</sup> Highest (date)
Monash	336	32.8	21 May	23.8	24 Jun

The 24-hour advisory reporting standard for  $PM_{2.5}$  was exceeded four times at Monash. The exceedences happened during late May to early July 2011 because of particle emissions from wood heaters during winter.

# ASSESSMENT OF PROGRESS TOWARDS ACHIEVING THE GOAL

The ACT is currently compliant with the goal specified in Schedule 2 of the AAQ NEPM.

Historical monitoring indicates that the only AAQ NEPM pollutant of concern in the Canberra airshed is particulate matter, which increases during winter because of emissions from domestic wood heaters. In more recent years exceedences of the particulate matter standard have also been attributed to dust storms and smoke from controlled burns.

The ACT Government acknowledges that woodsmoke is a problem and is working towards addressing the issue in an informed and measured manner to ensure a satisfactory outcome for all Canberrans.

It will continue to implement an integrated program to address woodsmoke. This will involve public education and enforcement activities, the licensing of firewood merchants, the implementation of the 'Don't Burn Tonight Campaign' and the on-going implementation of the Wood Heater Replacement Program.

It is pleasing to note that there were no exceedences of the  $PM_{10}$  standard in 2011 because of wood heater emissions, although monitoring clearly shows that levels increase during the winter months (refer to Figure 9 and Figure 10 for details). Since 2002 the 95<sup>th</sup> percentile for  $PM_{10}$  at Monash has fallen from  $42.4\mu g/m^3$  to  $22.8\mu g/m^3$ . This is a significant improvement.

The ACT will also work with the Commonwealth and other jurisdictions at a national level through the Standing Council on Environment and Water to progress actions to improve air quality, in particular national reforms to manage wood heather emissions.

# **APPENDIX A: STATISTICAL SUMMARY AND TRENDS**

The following section provides a basic statistical summary, using percentiles, for each station and for each standard. Percentiles for daily maximum values are presented.

## Carbon monoxide

Table 15: Statistical summary for daily maximum 8-hour CO Monash 2002 – 2011

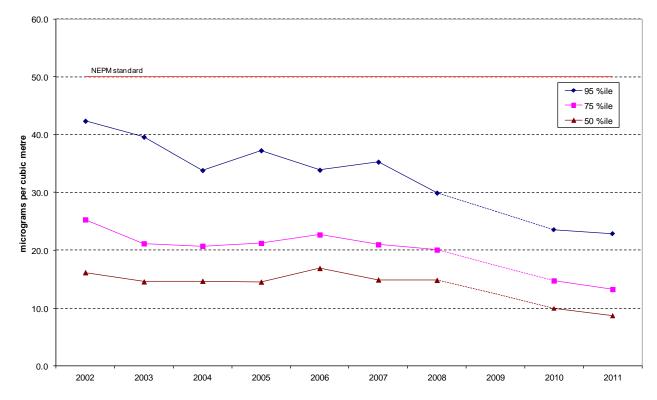

Figure 22: Statistical summary for daily maximum 24-hour  $PM_{10}$  Monash 2002 – 2011

**Note** 2009 data has not been included in **Figure 22** as the percentile data has been skewed because of insufficient data in Q1 and Q2 (zero and twenty five percent respectively) and the extreme readings associated with the dust storm which affected most of eastern Australia on 22 and 23 September, 2009.
